Instructions

- **40 marks. Pass mark 80% — 32 marks.** 45 minutes. Closed book.
- Section A: 20 multiple choice, one mark each. Section B: 12 short answer, one mark each. Section C: 4 applied questions, two marks each.
- Questions marked **[G]** are gating: you must answer these correctly to pass, regardless of total.
- Answers and marking guidance are held in **THECC-D0C-FVGPRO-EX-AK** (instructor copy).

Candidate name: ____ Date: __ **Score:** __ / 40

Section A — Multiple choice (20 marks)

A1. A bullish zone requires the middle bar to close: a) above its own open · b) above bar 1's high · c) below bar 3's low · d) anywhere inside the gap

A2. Detection Sensitivity at Extreme means: a) the strictest filter · b) the most permissive filter · c) volume filtering only · d) no filtering at all

- A3.** The size test applied to the gap is: a) $\text{gap} \div \text{sensitivity} > \text{ATR}$ · b) $\text{gap} \times \text{sensitivity} > \text{ATR}$ · c) $\text{gap} > \text{ATR} \times 2$ always · d) $\text{gap} > \text{the three-bar body sum}$
- A4.** 12.4K (68%) tells you: a) a 68% chance of a fill · b) the zone is 68% consumed · c) the volume split between the zone's halves was fairly even · d) 68% of volume was buying
- A5.** [Combined] means: a) two timeframes agree · b) overlapping same-direction zones merged · c) the zone was invalidated twice · d) volume and range filters both passed
- A6.** With Zone Invalidation on Close, a zone retires when: a) any wick pierces it · b) a body closes fully through it · c) three bars trade inside it · d) the session ends
- A7.** MSS is: a) a close beyond the most recent swing in the same direction · b) a close beyond the most recent opposing swing · c) any wick through a swing · d) two equal highs
- A8.** BOS indicates: a) reversal · b) continuation · c) a liquidity sweep · d) an invalidated zone
- A9.** Equal highs are confirmed: a) immediately · b) on the next bar · c) Swing length bars after the second pivot · d) only at session close
- A10.** A buy-side sweep is evidence against: a) higher prices · b) lower prices · c) the volume filter · d) the current structure direction
- A11.** The sweep lookback window: a) includes the current bar · b) excludes the current bar · c) is fixed at 20 · d) follows Multi-Fix
- A12.** Which elements follow Fix and Multi-Fix? a) everything · b) zones only · c) structure only · d) sweeps only
- A13.** One rendered zone consumes: a) 1 box · b) 2 boxes and 1 line · c) 4 boxes and 2 lines · d) 6 boxes
- A14.** The approximate total zone capacity across all timeframes is: a) 125 · b) 250 · c) 500 · d) unlimited
- A15.** With four Multi-Fix timeframes active, Zones kept per timeframe should be about: a) 125 · b) 60 · c) 30 · d) 10
- A16.** "Fire on bar close only" switched off means: a) alerts never fire · b) alerts fire once per session · c) alerts can fire on breaks that later fail · d) alerts become more reliable
- A17.** A BOS alert will not fire if: a) Show BOS is off · b) Show MSS is off · c) the chart is on M1 · d) Skull Mode is on
- A18.** Skull Mode: a) hides structure · b) reduces each zone to its midpoint and faint volume bars · c) deletes invalidated zones · d) doubles the drawing budget
- A19.** Zones are created: a) on every tick · b) on confirmed bars only · c) only on the last bar · d) at session open

A20. This indicator issues: a) buy and sell signals · b) probability grades · c) no trade signals · d) position sizes

Section B — Short answer (12 marks)

B1. State the middle-bar rule for a bearish zone.

B2. Why is the Average Range filter the right choice on a symbol with no reliable volume feed?

B3. What does a 35% balance figure tell you about how a zone was built?

B4. Define *confirmed* as the Academy uses the term.

B5. Give one element that can change intrabar and one that cannot.

B6. Why does a level broken twice carry only one structure line?

B7. Why would drawing equal levels immediately be worse than drawing them late? **[G]**

B8. In Fix mode on an M1 chart with Fix = M15, how wide is a zone drawn, and in whose bars?

B9. Name the three usual causes of an alert that does not fire.

B10. What is the signature on screen of the drawing budget being exhausted?

B11. State what a sweep is, in one sentence, without using the word "reversal".

B12. Why is "the gap will get filled" an unsafe assumption?

Section C — Applied (8 marks, 2 each)

C1. [G] List the seven steps of the reading sequence in order, and state which of them this indicator performs for you.

C2. [G] Price sweeps the session high and closes back below it. Structure does not shift; the next three structure events are bullish BOS lines. State your read, and what would have to change it.

C3. Your bias timeframe shows an unfilled bearish zone 40 points above price. A sweep and a bearish MSS have just completed, leaving a fresh zone 12 points above price. Your risk limit permits 15 points of invalidation distance. Describe how you would decide whether a trade exists — without stating a direction to trade.

C4. A student reports that zones "keep disappearing" on a Multi-Fix chart with four timeframes. Diagnose it, give the arithmetic, and give the fix.

Declaration
