Consistency Creates Freedom.

On-chart legend

Mark	Meaning
Coloured box	Fair value gap zone (bullish or bearish)
Two bars inside the box	Volume split between the zone's halves
12.4K (68%)	Three-bar volume · how evenly it split (high % = even)
M15 · prefix	Multi-Fix zone, tagged with its source timeframe
[Combined]	Overlapping same-direction zones merged
Box ending mid-chart	Invalidated at that bar
Box reaching the current bar	One of the most recent live zones
Dashed line inside a box	50% midpoint
Solid line + MSS	Structure shifted — closed through the last opposing swing

Mark	Meaning
Dotted line + BOS	Structure continued — closed through the last swing
Dashed level + EQH / EQL	Shelf of two near-equal pivots
\$ sweep above a bar	Buy-side sweep — high taken, closed back below → context for shorts
\$ sweep below a bar	Sell-side sweep — low taken, closed back above → context for longs

Detection in one line each

Element	Rule
Zone	Three-bar gap + middle bar closes through the edge + passes the size or volume filter. Confirmed bars only.
MSS	Close beyond the most recent opposing swing → direction stopped
BOS	Close beyond the most recent swing in the same direction → continuation
EQH / EQL	Two consecutive pivots within tolerance, drawn Swing length bars later
Sweep	Takes out the lookback high or low, then closes back inside, against the run

Sensitivity is permissiveness

gap size × sensitivity > ATR

Setting	Multiplier	Result
Extreme	6.0	Most zones
High	2.0	Fewer, larger
Normal	1.5	Fewer still
Low	1.0	Only clearly oversized gaps

The reading sequence

Map → liquidity → sweep → MSS → the zone the shift left → invalidation → size.

Steps 1–5 are what the indicator shows you. Steps 6–7 are yours, and they are the ones that matter.

Drawing budget

500 boxes / 500 lines / 500 labels per indicator. **One zone = 4 boxes + 2 lines → about 125 zones in total, across all timeframes.**

Active detection timeframes	Zones kept per timeframe
1	100–125
2	55
3	35
4	30
5	25

Defaults worth memorising

Setting	Default
Zone Invalidation	Close (body must close through)
Zone Filtering	Average Range
Detection Sensitivity	Extreme
Zones kept per timeframe	125
Delete untouched zones after	200 bars
ATR length	10
Pivot length (MSS / BOS)	5

Setting	Default
Max BOS lines	50
EQ swing length / tolerance	5 / 0.02%
Sweep lookback / max labels	20 / 50
Fire on bar close only	On
MSS + BOS alerts / EQ + sweep alerts	On / Off

Alert names

MSS Bullish · MSS Bearish · BOS Bullish · BOS Bearish · MSS (any) · BOS (any) · MSS or BOS (any) · Equal Highs (EQH) · Equal Lows (EQL) · Buy-side liquidity sweep · Sell-side liquidity sweep · Liquidity sweep (any) · New FVG (Auto/Fix) · New FVG TF#1 – TF#4

Or one alert on **Any alert()** function call:

Bullish BOS | NQ1! | 5 | level 20114.25 | close 20118.50

Three rules that prevent most errors

1. **Everything requires a close.** Wicks are not events.
2. **A sweep without an MSS is one wick with a label on it.**
3. **Invalidation before entry. Size last.**

Revision History
