Consistency Creates Freedom.

A · Getting started (1–8)

- 1. What does this indicator actually do?** Marks fair value gaps with the volume behind them, market structure shifts and breaks, equal highs and lows, and liquidity sweeps. It is a map of evidence.
- 2. Does it tell me when to buy or sell?** No. It issues no signals of any kind and holds no view on direction.
- 3. Can I use it on stocks, crypto and forex?** Yes. On symbols without an honest volume feed, use Average Range filtering and ignore the volume figures.
- 4. Which timeframe should I start on?** M5 with defaults. Then set detection to Fix on M15 and keep executing where you like.
- 5. Do I need other THECC products for this to work?** No, it is standalone. It pairs naturally with an execution tool because it deliberately does not execute.
- 6. Why must I save the script?** TradingView only attaches alerts to saved indicators.
- 7. Can I run two copies with different settings?** Yes — one Fix on H1 for bias and one in Auto for execution is a common layout. Mind the drawing budget; each instance has its own 500-object allowance.
- 8. Does it work on replay?** Yes. Zones form on confirmed bars, which makes replay honest practice.

B · Detection (9–22)

- 9. Why did an obvious gap not draw?** The middle bar did not close through the gap edge, the move was too small against ATR, or the bar-to-bar jump exceeded ATR with Allow Gaps off.
- 10. What is the middle-bar rule?** Bullish: bar 2 closes above bar 1's high. Bearish: bar 2 closes below bar 1's low.
- 11. Does the zone cover the three bars?** No — only the untraded range between bar 1 and bar 3.
- 12. Same Type versus All?** Same Type needs three bars of one direction: cleanest and fewest. All accepts mixed sequences and produces more zones.
- 13. Average Range or Volume Threshold?** Average Range for anything; Volume Threshold only where volume is trustworthy.
- 14. What does Volume Threshold % compare?** 5-bar average volume against 15-bar average volume.
- 15. Is higher sensitivity stricter?** No. $\text{gap} \times \text{sensitivity} > \text{ATR}$ — Extreme (6.0) admits the most zones, Low (1.0) the fewest.
- 16. What does the sensitivity checkbox do when unticked?** Disables both size tests. Every geometric gap draws. Study only.
- 17. Why does ATR length matter?** It is the yardstick for both size tests. Longer is steadier and rejects fewer zones after one volatile bar.
- 18. Can a zone vanish after appearing?** Not from detection — zones form on confirmed bars. Appearance changes when zones merge.
- 19. What is Allow Gaps Between Bars?** It permits session and news gaps that the ATR jump check would otherwise reject.
- 20. Why are there more zones on lower timeframes?** More bars, more sequences, smaller ATR. Lower timeframes always produce more.
- 21. Does it detect inverted or inverse gaps?** Not in this product. This build detects and tracks fair value gaps, their invalidation and their merging.
- 22. Does the indicator look ahead?** No. Higher-timeframe data is requested without lookahead, and zones are created on confirmed bars.

C · Reading the chart (23–34)

- 23. What is 12.4K (68%) ?** Total volume of the three bars, and how evenly it split between the zone's halves. High percentage means even.
- 24. Is a high percentage better?** It is not a quality score. It describes how the level was built.
- 25. What is the dashed line inside a box?** The 50% midpoint.
- 26. What does [Combined] mean?** Overlapping same-direction zones merged into one, volumes added.
- 27. Why is one zone much wider than the others?** Either it is combined, or it is one of the latest zones extended to the current bar.
- 28. What does a box that stops mid-chart mean?** It was invalidated at that bar.
- 29. What is the M15 · prefix?** The source timeframe in Multi-Fix mode.
- 30. What is Skull Mode for?** Keeping levels while removing nearly all visual weight.
- 31. Why do the newest zones reach the current bar?** Extend latest zones to current bar — three by default.
- 32. Should I keep historic zones on?** While learning, yes. They are the audit trail.
- 33. What is the difference between MSS and BOS again?** MSS: closed through the last **opposing** swing, direction stopped. BOS: closed through the last swing in the **same** direction, continuation.
- 34. Why is a \$ sweep label above the bar bearish context?** It names the side of the book that was taken. Buy stops above were filled and price could not hold.

D · Structure, levels, sweeps (35–44)

- 35. Why did structure ignore a break?** It was a wick. Structure requires a close.
- 36. What does pivot length change?** How large a swing must be to qualify. Higher gives fewer, more significant events.
- 37. Why only one line at a level broken twice?** Duplicate-level suppression.
- 38. Why did all my structure lines disappear?** Clear previous structure lines on each new MSS is switched on.
- 39. Why are equal levels late?** Pivots need bars on both sides to confirm. The alternative repaints.
- 40. No equal levels at all?** Tolerance too tight for the symbol. Raise it gradually.

- 41. What exactly is a sweep here?** Price exceeds the lookback high or low, excluding the current bar, then closes back inside against the run.
- 42. Why so many sweeps?** Short lookback. Raise it to 50–200 for long-standing levels.
- 43. A sweep printed and price kept going — is it broken?** No. A sweep is a failed breakout, not a reversal. Require an MSS before treating it as a turn.
- 44. Do structure and sweeps follow Multi-Fix?** No. Chart timeframe only. Only zones follow Fix and Multi-Fix.

E · Alerts (45–52)

- 45. How many alerts should I run?** Start with one: `MSS (any)` .
- 46. Which route gives the broken level?** The dynamic route — "Any alert() function call".
- 47. What is the message format?** `<direction> <event> | <ticker> | <timeframe> | level <price> | close <price> .`
- 48. What is the prefix for?** Routing to a bot or webhook.
- 49. Why did my BOS alert never fire?** Show BOS is off, which gates detection.
- 50. Why are sweep and equal-level alerts off by default?** They fire far more often than structure events.
- 51. Should I disable bar-close gating for speed?** No, not for anything you trade. Without it you will be alerted to breaks that fail before the close.
- 52. Can one alert cover several timeframes?** The `New FVG TF#1 – TF#4` conditions are per slot; the dynamic route covers structure, equal levels and sweeps on the chart timeframe.

F · Display and performance (53–58)

- 53. Why did my old zones disappear?** The drawing budget: 4 boxes per zone against a 500-box ceiling, about 125 zones in total.
- 54. How do I fix it?** Lower Zones kept per timeframe — roughly 30 when four timeframes are active.
- 55. Why is a zone drawn without its volume bars?** The budget ran out mid-zone. Same fix.
- 56. The script times out. What do I cut first?** Active timeframes, then zones kept, then max bars back to process.

57. Can I raise the 500-object limit? No. It is a TradingView platform limit and the declaration requires compile-time constants.

58. Does Skull Mode make it faster? Not materially. It changes appearance, not object count.

G · Expectations and risk (59–64)

59. What win rate does this produce? None — it produces no trades. Any figure attached to it would be a claim about a plan, not about the indicator.

60. Do gaps always get filled? No. Many never do.

61. Is a bigger zone a better zone? Bigger means more displacement, and also a wider invalidation distance. Whether that is better depends entirely on your risk limit.

62. Can I automate from the webhook messages? The messages are structured enough to route, but automating an entry from a map is a decision about your plan and your risk, not a feature of this tool.

63. Where does risk management live? Outside this indicator, in your written plan. The tool deliberately has no view.

64. Is this financial advice? No. Every document in this suite is educational material only.

H · Documentation and versions (65–70)

65. Which version do these documents describe? FVG PRO v2.1.x. Check the script header against the document header.

66. Is the course certified? Not yet. Status is Content Complete — Certification Pending until the build passes the TradingView compile green-check and the owner signs off.

67. Why do the guides show screenshot placeholders? Real captures are outstanding across the product range.

68. Where is the full course? Student Guide [THECC-D0C-FVGPRO-SG](#) .

69. Where do I look when something on screen looks wrong? Troubleshooting Manual [THECC-D0C-FVGPRO-TS](#) .

70. Why does this product have no THECC-NNNN number? The registry has not assigned one. It raises the question under THECC-0008, and IDs are assigned once and never change, so the documents say "Registry ID pending" rather than guessing.

Revision History

Version	Date	Author	Change
v2.1.0	2026-09-20	Dale Batise	First FAQ Book for Fair Value Gaps PRO v2.1: 70 questions across getting started, detection, chart reading, structure, alerts, display, expectations and documentation.

Educational material only. Not financial advice, not a signal service, and not a claim about future results.
