Consistency Creates Freedom.

1 · What the lab is for

The lab teaches students to **narrate the map in real time** — to say what the chart is showing while it is still uncertain. Reading a completed sequence on a historical chart is a different skill from reading one that has not finished yet, and only the second one transfers to trading.

 **The lab does not require a live position, and no student is ever asked to take one to complete it.**

Observation and narration satisfy every objective. Where a session runs on live capital, it runs on the student's own written plan and their own risk limits, which this course does not set and does not review.

2 · Before the session

Check	Detail
Platform	Indicator saved, correct instance, defaults or a documented configuration
Chart	Liquid symbol, standard candles, execution timeframe, detection Fixed to the bias timeframe
Budget	Zones kept per timeframe set for the number of active timeframes
Alerts	One MSS (any) alert live
Journal	Sequence worksheet from the Workbook open and ready
Session	Know what is scheduled — a news release invalidates the lab's premise

3 · Session structure (90 minutes)

Time	Phase	What happens
0–10	Map	Each student states aloud: unfilled zones above and below, equal-level shelves, session extremes. No opinions on direction.
10–15	Written plan	Each student writes the one sequence they will watch for, and the invalidation it would carry. Submitted before the session proper begins.
15–70	Narration	Students call events as they print: sweep, shift, new zone. Instructor asks "what would make that wrong?" after every call.
70–80	Debrief	Compare what printed against what each student wrote at minute 15.
80–90	Journal	Complete the worksheet; log the sequences that did and did not complete.

💡 The value is concentrated in the minute-15 written plan. Without it, the debrief becomes a memory of what everyone "knew all along".

4 · Narration rules

- 1. **Name the event, not the forecast.** "Buy-side sweep on the session high" is a call. "It's going down now" is not.
- 2. **Every call carries an invalidation.** If a student cannot say where it would be wrong, the call is incomplete.
- 3. **Silence is a valid session.** If the sequence never appears, the correct output is "no sequence today".
- 4. **No settings changes during the session.** Log the wish, change it afterwards, note it in the discipline log
- 5. **A sweep is not a turn until structure says so.** Expect to say this repeatedly.

5 · Instructor scoring

Behaviour	Evidence
Called events accurately	Narration matched the chart
Stated invalidation unprompted	Every call, without being asked
Distinguished MSS from BOS live	Correct classification before the label rendered
Resisted the missing-shift trade	Named the absent MSS and stood down
Kept the settings panel closed	Observation
Journal completed honestly	Worksheet shows the pre-written plan, including the ones that failed

A student who completes a session with **no sequences observed** and an accurate record of why has passed that session. Force nothing.

6 · Session log

Date	Symbol	Session	Sequences seen	Sequences completed to step 5	Stood down because step 4 never came	Notes

7 · Frequent lab moments

Moment	Instructor response
"There's a gap, I'd buy there"	"What is your invalidation, and how far is it?"
"The sweep just happened, go"	"Has structure shifted? What would that look like?"
Student changes sensitivity mid-session	Stop the session. This is the lesson, discuss it now.
Zones vanish mid-lab	Drawing budget. Fix live, then explain the arithmetic.
Nothing has happened for 40 minutes	Correct. Say so out loud — waiting is the job.
