Consistency Creates Freedom.

Summary

v2.1 adds liquidity sweeps and educational tooltips to the v2.0 release, which itself added market structure, equal highs and lows, an English settings menu and a fully configurable Zone Engine. **No change was made to fair value gap detection, volume profiling, Skull Mode or the multi-timeframe engine in either release.** An existing chart upgraded to v2.1 with untouched settings draws the same zones it drew before.

 **Compile status: not green-checked.** This build has not yet passed the TradingView compile verification, so the documentation set carries **Content Complete – Certification Pending** per Academy Documentation Standard v1.0 §2a.

New in v2.1

Liquidity sweeps

Marks a bar that runs a recent high or low and then closes back inside it, against the direction of the run — a failed breakout.

Detail	Value
Buy-side	Price exceeds the highest high of the lookback window, excluding the current bar, then closes back below it on a down-closing bar
Sell-side	Mirror of the above, below the lowest low
Lookback	5–200 bars, default 20
Timeframe	Chart timeframe
Labels	Independent styling per side: text, size, style, text and background colour
Label cap	New setting, default 50
Alerts	Buy-side liquidity sweep , Sell-side liquidity sweep , Liquidity sweep (any) , plus dynamic <code>alert()</code> messages. Both default off .

💡 The label cap is new behavior worth knowing about: sweep labels are now tracked and the oldest removed past your limit, so they cannot silently consume the 500-label ceiling shared with the market-structure and equal-level labels.

Educational tooltips

Every settings group now carries an in-panel explanation covering the mechanism, what the default does and the counter-case — the same style used elsewhere in the range. The tooltip on **Detection Sensitivity** states explicitly that the control is a *permissiveness* multiplier ($\text{gap} \times \text{sensitivity} > \text{ATR}$), which is the most commonly misread setting in the product.

New in v2.0

Feature	Detail
Market structure	MSS (structure shift) and BOS (break of structure) on the chart timeframe, close-based, with duplicate-level suppression. Full per-direction styling of lines and labels, pivot length, max BOS lines, and an optional clear-on-shift switch.
Equal highs / lows	Confirmed-pivot shelves within a tolerance percentage, with extension, drawing cap and full styling.

Feature	Detail
Alerts	9 named conditions plus dynamic <code>alert()</code> messages carrying direction, event, symbol, timeframe, broken level and close. Bar-close gating on by default; per-signal toggles; optional message prefix.
English settings menu	Every input title, tooltip and code comment.
Zone Engine	The values that were previously hardcoded are now settings: zones kept per timeframe, combine overlapping zones, overlap threshold, minimum zone duration, untouched-zone cleanup, max bars processed, ATR length — plus zone width, dynamic width, extend-latest count, combined-zone colour and tag, and volume-bar side and mirroring in Style. Every default equals the old hardcoded value.

Unchanged

The following are byte-for-byte identical to the pre-2.0 baseline:

- Three-bar gap detection, the middle-bar close confirmation and both quality filters
- The volume split, the balance percentage and the zone text
- Zone merging, extension, invalidation and cleanup logic
- Skull Mode
- Auto / Fix / Multi-Fix timeframe resolution and the five detection slots
- The original `New FVG` alert conditions

Upgrade steps

1. Copy the v2.1 `.pine` source over your existing script in the Pine Editor and **Save**.
2. Re-add to chart if you keep separate saved instances.
3. Open settings and confirm your zone, style and timeframe choices survived. They should: no existing input was renamed or removed.
4. **If you run Multi-Fix**, set *Zones kept per timeframe* per the table below before judging the display.
5. Re-check your alerts. Existing `New FVG` alerts continue to work. New structure, equal-level and sweep alerts must be created, and their per-signal toggles switched on.

Active detection timeframes	Zones kept per timeframe
1	100–125
2	55
3	35
4	30
5	25

Known limitations

Limitation	Detail
Structure is chart-timeframe only	MSS, BOS, equal levels and sweeps do not follow Fix or Multi-Fix. Their drawings anchor to chart bars.
Drawing budget	TradingView allows 500 boxes, 500 lines and 500 labels. One zone costs 4 boxes and 2 lines, so about 125 zones total. Past that, the platform discards the oldest objects silently.
BOS alerts depend on a display toggle	BOS detection is gated by Show BOS ; with it off, no BOS alert can fire.
Sweep labels are live-bar	A sweep label can appear and vanish before the bar closes. Alerts are bar-close gated by default for this reason.
Equal levels are confirmed late	By design — <code>Swing length</code> bars after the second pivot. The alternative repaints.
Two drawing-limit values cannot be settings	The indicator declaration requires compile-time constants.
Screenshots in the documentation	Still placeholders. Real captures are outstanding across the product range.

Documentation

Document	ID	State
Student Guide	THECC-D0C-FVGPR0-SG	Delivered
Cheat Sheet	THECC-D0C-FVGPR0-CS	Delivered
Quick Start	THECC-D0C-FVGPR0-QS	Delivered
Instructor Guide	THECC-D0C-FVGPR0-IG	Delivered

Outstanding before publication

1. Registry ID assignment — this product has none; the registry raises the question under **THECC-0008**.
2. _SOURCE_OF_TRUTH.json creation, per Academy Documentation Standard §2.
3. TradingView compile green-check, then owner sign-off before any Production Certified stamp.
4. Real screenshots and portal QR URLs.

Revision History

Version	Date	Author	Change
v2.1.0	2026-09-20	Dale Batise	Release notes for v2.1 (liquidity sweeps, educational tooltips) and v2.0 (market structure, equal highs and lows, English menu, Zone Engine settings).

Educational material only. Not financial advice, not a signal service, and not a claim about future results.
